July 26, 2021 - In September 2020, the RYR-1 Foundation published the *Clinical Care Guidelines: What Patients & Families Need to Know About RYR-1-Related Diseases*. This handbook is written in non-technical, easily understood language to empower patients and families with RYR-1-related diseases to improve their care and quality of life. With today's announcement of a new version translated into **Russian**, the *Clinical Care Guidelines* is now available in the following languages: Arabic, Chinese (Simplified), English, French, German, Russian, Spanish, and Vietnamese. These are freely available at www.ryr1.org/ccg.

The RYR-1 Foundation is making every effort to ensure the *Clinical Care Guidelines* is widely accessible to the entire RYR-1 community, regardless of geographic location, spoken language, socioeconomic status, or education level. As the only organization dedicated solely to RYR-1-related diseases and with a large worldwide following, the RYR-1 Foundation is confident that it is the ideal organization to not only create the *Clinical Care Guidelines*, but also to ensure its availability to the maximum number of people.

In November 2019, the RYR-1 Foundation was awarded a \$50,000 grant from **The Oscar and Elsa Mayer Family Foundation** to produce a handbook written *exclusively* for patients and families affected by RYR-1-related diseases. The *Clinical Care Guidelines* is over 100 pages long with content that will help the RYR-1 community better understand RYR-1-related diseases. This online handbook utilizes numerous educational graphics and illustrations. Many topics are covered, including the role of calcium in RYR-1-related diseases, modes of genetic

inheritance, and potential therapies. Each chapter contains a link to extensive online resources that the RYR-1 Foundation has provided. **A copy of the *Clinical Care Guidelines* is freely available and easily downloadable at www.ryr1.org/ccg.** On this website, there is also a brief video that introduces the *Clinical Care Guidelines* and explains some of its unique features.

“By creating versions of the *Clinical Care Guidelines* in several different languages, the RYR-1 Foundation will be able to help more people worldwide who are affected by this condition,” says Michael F. Goldberg, MD, MPH, President of the RYR-1 Foundation. “This is a major step forward for not only the RYR-1 Foundation, but the entire RYR-1 community.”

About the RYR-1 Foundation

The Pittsburgh, Pennsylvania-based 501(c)(3) public charity was launched in October 2014 by members of the Goldberg family, who have been affected by an RYR-1-related disease. It is currently the only organization that exists solely to advocate for and serve the needs of patients with RYR-1-related diseases, the most common causes of congenital myopathy. The mission of the RYR-1 Foundation is to support research leading to effective treatment or a cure for RYR-1-related diseases, to educate physicians about these diseases, and to provide patient/family support and advocacy.
